# A page can travel farther than a voice.

Printing connects technologies, materials, labour and systems of circulation.

# Printing has more than one origin.

| | |
|---|---|
| 7th–9th c. | Woodblock printing develops in East Asia. |
| 11th c. | Bi Sheng develops movable type in China. |
| 15th c. | Metal movable type and press printing expand in Europe. |

# A technology becomes a system.

Type and page

Ink and paper

Readers and circulation

Production and circulation are parts of the same system.

# More copies do not mean equal access.

## Production

Making copies can increase the availability of a text.

## Access

Availability does not remove the social and economic barriers to reading.

# Ask who made it.
# Ask who could read it.

Study a printed object as evidence of both a production process and a social world.
